

Plastic case UPM-N (new) is a significantly modified UMSP-Pm/2 plastic case.

More than 70 000 ambulance cars in all Russian regions have been equipped and reequipped with plastic cases for the last 20 years.

Dimensions: (514x260x324) mm ± 5%

Empty weight: 3,7 kg

DESCRIPTION

New plastic case development takes into account all wishes of physicians that have arisen over decades of their use:

- While the external dimensions of the case have been increased slightly, the internal usable volume has become much larger, and the view of the contents has been improved by increasing the opening degree of the flaps. Now the case can hold more than two hundred ampoules in trays alone with easier access to them and the medical equipment.

- The flat top of cases allows stacking them for easy storage. In addition, the case can now be used as a stand or seat for the patient or the physician.

- The durability and usability of the case has increased significantly due to structural improvements and higher quality heat and vandal resistant plastic. Thanks to these improvements the case can withstand the load up to 200 kg and the temperature up to 50 °C.

- New 1-2 ml and 5-10 ml plastic ampoule cases have been added, designed to be placed in trays, as well as at the bottom of the plastic case or in specially designed cells inside the flaps. It is possible to combine the use of traditional lodgements with vertically oriented ampoule cases. This solution made it possible to increase (when necessary) the number of conveniently placed and well-protected ampoules up to 250-270 pieces and enabled medical personnel to choose the optimal combination of traditional lodgements and new plastic ampoule cases.

- The new plastic case design allows the manipulating table to be placed in previously empty areas within the flaps, while providing a section at the case bottom for additional contents.

- Special shoulder strap fixation points have appeared.

- There is space inside the plastic case for a LED flashlight, and PVC pouches outside the case to store waste and personal protective equipment.

- Removable partitions were added to the bottom and tray.

- The lodgement is made of the new moisture resistant EVA material. The lodgement design considers all wishes of emergency doctors to accommodate ampoules of different volumes.

- Removable partitions were added to the bottom and tray.

Medical devices for emergency care

PLASTIC CASE FOR EMERGENCY DOCTOR

UPM-N SERIES

MEDICAL PLASTIC CASE OF UPM SERIES

The device presents the plastic case made of heavy-duty heat-resistant orange plastic with a comfortable molded handle and secure locks.

The bottom of the case is solid and wear-resistant. The top of the case is made in the form of flaps opening to the sides, in which the trays are installed, maintaining a constant vertical orientation, which prevents the contents from overturning when the case is opened.

USABLE VOLUME
32 l

TEMPERATURE RANGE OF OPERATION -45 °C to +50 °C

WITHSTANDS THE LOAD
over 200 kg

WEIGHT (without contents and lodgements) 3,7 kg

DIMENSIONS:
(514x260x324) mm ± 5%

PURPOSE

Plastic medical cases are intended for storage and transportation of medications, medical instruments, bandages and other devices used in emergency care.

SCOPE OF APPLICATION

First aid and ambulance services, emergency medicine, healthcare institutions, medical rooms of various enterprises.

BATTERY-CHARGED LED FLASHLIGHT WITH FIXTURE (optional)

convenient storage space

possibility to install both inside and outside the case

fixtures to prevent ampoules from falling out

CARRYING STRAP

tray

reinforced flap levers

removable partitions at the bottom and the tray

lodgements

lock

flap

bottom

lever

AMPOULE CASE FOR MEDICATIONS

1-2 ml and 5-10 ml volume

COMFORTABLE AND RELIABLE LOCKS

5-year warranty

regular storage space for ampoules

lodgments

tray

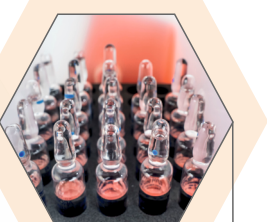

REGULAR STORAGE SPACE FOR THE MANIPULATING TABLE

located inside the case flaps

MANIPULATING TABLE

can be fixed on any vertical surface of the case

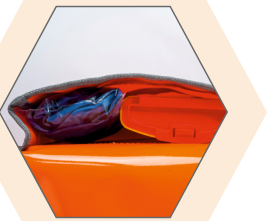

LODGEMENTS TO ACCOMMODATE AMPOULES

made of moisture-resistant material, equipped with spaces for scarificators, ampoules, bottles

EXTERNAL POUCH

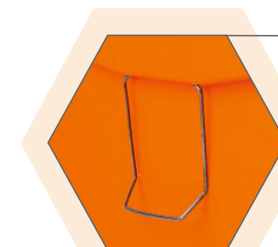

can be used as a waste container or to store the personal protective equipment

STAPLE

for class B waste bag transportation

CONCEALED CLAMPING DEVICES

keep your clothes clean
