

CATALOGUE

INTRODUCTION

MEDPLANT, LLC was founded in 2000. Today it is a famous and successful manufacturing company, specializing in the production of medical devices for emergency care.

The main purpose of our development – the creation of portable, reliable, modern, easy to use medical devices for emergency medical services, disaster medicine, lifesavers and volunteers. The devices are used in difficult climatic and environmental conditions, in transport, emergency situations and etc.

Company “MEDPLANT” has many patents and awards. The company was assessed and found to be in conformity with the requirements of ISO 9001, ISO 13485. Also MEDPLANT has successfully passed the procedure of our products compliance to the requirements of the European Council Directive and got the permission for CE marking, that confirms good quality and safety of our products.

CONTENTS

1 INTRODUCTION

1

RESUSCITATION PRODUCTS

- 6 Automatic compression machine for cardiopulmonary resuscitation “ARKA”
- 10 “TEMP” cardiopulmonary resuscitation (CPR) efficiency indicator
- 12 Single-use folding cardiopulmonary resuscitation mask
- 14 Portable aspirator with mechanical drive APM-MP-1
- 16 Portable electric aspirator AEP-01
- 18 Manual artificial respirating units ADR-MP
- 22 Disposable medical instrument

2

PRODUCTS FOR BLEEDING CONTROL

- 26 Compression tourniquet ZHK-01- “MEDPLANT”/ ZHK-02- “MEDPLANT”

3

THERMO-INSULATING CONTAINERS AND INFUSION PRODUCTS

- 30 Portable syringe driver for medicine “DSHP 5-20-SHMEL”
- 32 Thermo-insulating container with automatic heating and temperature regulation of infusion solutions TK- “MEDPLANT”
- 34 Folding IV pole SHR- “MEDPLANT”
- 36 Set of holders for infusion vials DF- “MEDPLANT” (infusion set)
- 38 Textile and plastic ampule holders

4

MONITORING PRODUCTS

- 44 Portable resuscitation CO₂/SPO₂ MONITOR “CAPNOPULSE”
- 46 Portable resuscitation CO₂ monitor “CAPNOTEST-2”/ “MINICAP”
- 48 Portable resuscitation SPO₂ monitors (PULSE OXIMETERS) “OXITEST-1 ”/ “OXITEST-2”

5

DEVICES FOR IMMOBILIZATION AND MEDICAL EVACUATION

- 52 Sets of transport immobilization folding splints of KSHTI-series
- 56 Set of transport ladder splints KSHTL-MP-01
- 58 Foldable traction leg splint SHTS-01-“MEDPLANT”
- 60 Pelvic stabilization belt: reusable PST-“MEDPLANT”/ disposable PSTo-“MEDPLANT”
- 62 Cravat bandage PK
- 64 Immobilization spine board YXH-1A6A
- 66 Device for patient’s moving UP-“MEDPLANT”
- 68 Frameless stretchers “PLASCH”
- 72 Evacuation sledges “VOLOKUSHI” model no.1/ model no.2
- 74 Injured personnel carrier RUP-“MEDPLANT”

6

PLASTIC CASE FOR EMERGENCY DOCTOR

- 78 Plastic medical case of UPM-N series
- 80 Plastic cases of UPM-series

7

BAGS, BACKPACKS, VESTS

- 86 Universal bags of SMU-series
- 90 Universal bags of SR-series
- 92 Collapsible universal bags of SUR/SURt-series
- 94 Universal backpacks of RMU-series
- 96 Universal backpacks of RVU-series
- 100 Universal devices of “VOLUNTEER”-series
- 102 Load bearing vests ZHR-01

RESUSCITATION PRODUCTS

- 6 Automatic compression machine for cardiopulmonary resuscitation “ARKA”
- 10 “TEMP” cardiopulmonary resuscitation (CPR) efficiency indicator
- 12 Single-use folding cardiopulmonary resuscitation mask
- 14 Portable aspirator with mechanical drive APM-MP-1
- 16 Portable electric aspirator AEP-01
- 18 Manual artificial respirating units ADR-MP
- 22 Disposable medical instrument

AUTOMATIC COMPRESSION MACHINE FOR CARDIOPULMONARY RESUSCITATION “ARKA”

The device provides closed-chest massage to a patient.

Designed for providing the automatic chest compression when patients are under cardiac arrest condition. The device provides continuous and accurate compressions, this procedure is the key element of successful resuscitation.

The device performs the chest compressions with optimal rate and depth that decreases the risk of human mistake and securers weariness.

All details and product specifications

It's easy to transport and use in different conditions- in ambulance cars as well as in hospital departments and field conditions.

AUTOMATIC COMPRESSION MACHINE FOR CPR

TRANSPORTATION BACKPACK

- Patented and ergonomic system of device fixation
- Positioning lighting for control and placing the suction cup
- Reinforced reliable fasteners

Three regimes of CPR

"15:2" - 15 patient's chest compressions followed by a pause for two breathes;

"30:2" - 30 patient's chest compressions followed by a pause for two breathes;

"CONT" - continuous chest compressions.

CONTROL AND DISPLAY SYSTEM

THREE REGIMES OF CPR

15/2

30/2

CONT

OPTICAL POSITIONING DESIGNATOR

Functional characteristics

The CPR machine provides the chest compression to patient with the following chest dimensions in recumbent position:

- chest height – 170 mm - 305 mm;
- chest width – up to 450 mm.

The possibility to use the device in limited spaces

Patent of invention No. 2818452. The applied patent technical solutions allow to start the chest compression with CPR device “ARKA” to patients in accident locations with the limited space which is relevant during manmade disaster.

ERGONOMICS AND PORTABILITY OF STORAGE

“TEMP” CARDIOPULMONARY RESUSCITATION (CPR) EFFICIENCY INDICATOR

It assists in assessment of the CPR quality.

“Temp” CPR efficiency indicator measures the acceleration using a built-in accelerometer, calculates movement along the vertical axis and provides such information as chest compression frequency and depth by means of light and sound signals.

The device helps to perform the optimal chest compressions during the entire resuscitation period increasing the chances for preserving brain circulation and further restoration of the cardiac function by means of a defibrillator.

All details and product specifications

It is fitted with a built-in light indicator informing about the compression depth: the yellow signal means insufficient compression, the green signal means optimal compression and the red signal means excessive compression. The sound signals of the device are doubled by the light indicator signals and set the compression rate of 110 beats per minute.

CPR EFFICIENCY INDICATOR

● Chemical disinfection.

SINGLE-USE FOLDING CARDIOPULMONARY RESUSCITATION MASK

Used for resuscitation of adults and children with height above 120 cm.

The mask is fitted with an elastic adjustable strap to attach it to an injured person's head. There is a port for connection of the oxygen supply tube in the lower part of the mask.

The soft cuff provides tight attachment and the non-return valve with a filter provides reliable protection.

The mask is supplied with a compact and strong case for convenient storage and transportation.

All details and product specifications

Allows to provide the immediate respiratory support and protection for the person providing the first-aid care without CPR efficiency reducing.

● Single-use product, not reusable.

PORTABLE ASPIRATOR WITH MECHANICAL DRIVE APM-MP-1

High-efficiency, lightweight, reliable mechanical medical aspirator with a two-stroke operating principle.

The mechanical aspirator provides the high efficiency of aspiration (2 l/min with thick aspirate, 6 l/min with water) with low efforts and portable sizes.

Thanks to original design solutions, the user does not need to put high pressure when pressing the pedal, which allows to use it both by foot (including while sitting) and by hand.

The aspirator is protected from overfilling of the liquid collector, and aspiration catheters of different sizes are offered optionally.

All details and product specifications

- Reusable demountable device which can be autoclaved
- Non-electric device which does not require the charging, so it can be used in any conditions.

ASPIRATOR WITH MECHANICAL DRIVE

- Chemical disinfection, autoclaving at $t = 121^{\circ}\text{C}$, boiling.

PORTABLE ELECTRIC ASPIRATOR AEP-01

Used for patient care in situations requiring removal of liquids through the mouth cavity, the nasopharyngeal cavity and other body cavities.

The device is fitted with a single power button allowing the doctor to start the aspiration process immediately.

The light vacuum indicator is located on the side panel of the device. The smooth adjustment function allows to set the required vacuum level ranging from 0 to 500 mmHg.

The device has the patented energy-saving technology which allows to increase the autonomous operation comparing with analogues.

All details and product specifications

The aspirator is fitted with a built-in power source for autonomous operation: a rechargeable Li-Ion battery with rated capacity of at least 2,600 mAh and rated voltage above 11.1 V. The fully charged battery allows the aspirator pump to operate for at least 45 minutes.

The weight is not more than 3 kg.
Overall dimensions in cover – 300x190x215 mm;
without cover - 172x172x211 mm.

ELECTRIC ASPIRATOR PUMP

- Chemical disinfection, autoclaving at $t = 121^{\circ}\text{C}$, boiling.

MANUAL ARTIFICIAL RESPIRATING UNITS ADR-MP

Designed for manual respiration of patients with respiratory compromises of any etiology.

The manual artificial respirating units are a set of products necessary for manual resuscitation activities and respiration. The set includes the manual resuscitator of KD-MP series and high-efficiency portable aspirator with mechanical drive APM-MP-01.

The apparatus is supplied in a compact rigid-framed bag protecting the device from damage with a convenient handle and shoulder belt for transportation.

All details and product specifications

The set can be used either autonomously or in medical transport, medical resuscitation facilities as well as in operating rooms before connecting to an electric lung ventilator.

ADR-MP-V (for adults)
WITH AN ASPIRATOR

MANUAL ARTIFICIAL RESPIRATING UNITS ADR-MP WITH ASPIRATOR

The manual artificial respirating unit with an aspirator is supplied in a compact rigid-framed bag protecting the device from damage with a convenient handle and shoulder belt for transportation.

ASPIRATOR

ADR-MP-N (for newborns) WITHOUT
ASPIRATOR

DISPOSABLE MEDICAL INSTRUMENT

Disposable sterile surgical instruments.

The forceps are designed to grasp and pinch blood vessels and bleeding areas during the surgical operations.

The tongue holder is designed to grasp, pull, and hold the tongue in the desired position.

The tweezers are designed to grasp the bandages, cotton pads, and gauze swabs during surgical operations and bandages.

All details and product specifications

Application conditions: in medical and preventive care facilities, mobile medical units, ambulances, field conditions, at home.

PRODUCTS FOR BLEEDING CONTROL

- 26 Compression tourniquet ZHK-01-“MEDPLANT”/ ZHK-02-“MEDPLANT”

COMPRESSION TOURNIQUET ZHK-01-“MEDPLANT”/ ZHK-02-“MEDPLANT”

Designed for emergency and efficient arresting of external arterial hemorrhage.

The original hemostatic tourniquet (windlass rod tourniquet) is a flat “Velcro” strap with a buckle. The tourniquet has a spool with two slings. Compression is achieved by moving the lever, which winds the slings onto the spool, tightens the flat strap, and arrests the bleeding.

“UZH-01” tourniquet fastener is designed to secure folded tourniquets on vests, backpacks, pouches, etc.

Pouches “UZH-02” and “UZH-03” are designed to easily accommodate and swiftly deploy the tourniquets. Made from durable synthetic fabric, these pouches resist abrasion and withstand washing and cleaning.

Equipped with “MOLLE” fasteners.

All details and product specifications

Causes minimal pain and provides the reliable stopping of hemorrhage during mutual and self help.

COMPRESSION TOURNIQUET

- Single-use product, not reusable.

3

THERMO-INSULATING CONTAINERS AND INFUSION PRODUCTS

- 30 Portable syringe driver for medicine “DSHP 5-20-SHMEL”
- 32 Thermo-insulating container with automatic heating and temperature regulation of infusion solutions TK-“MEDPLANT”
- 34 Folding IV pole SHR-“MEDPLANT”
- 36 Set of holders for infusion vials DF-“MEDPLANT” (infusion set)
- 38 Textile and plastic ampule holders

PORTABLE SYRINGE DRIVER FOR MEDICINE “DSHP 5-20-SHMEI”

Lightweight and convenient portable syringe driver.

The main advantage of device - autodetection of syringe volume. These features greatly simplify operations, allowing medical professionals to set just one parameter - the speed and the syringe driver is ready to use.

The compact design and light weight allow placing the device in a plastic emergency case and using this device everywhere: in clinics, in field conditions, on mobile medical units, in ambulances, etc.

The device is compatible with 5, 10 and 20 ml single-use syringes.

All details and product specifications

- Automatic detection of the nominal syringe volume (5 - 20 ml);
- CPR infusion mode for cardiopulmonary resuscitation;
- Comfortable fixation with the clamp.

THERMO-INSULATING CONTAINER WITH AUTOMATIC HEATING AND TEMPERATURE REGULATION OF INFUSION SOLUTIONS TK-“MEDPLANT”

Designed for reaching and maintaining of the operating temperature of infusion solutions during their transportation and temporary storage in ambulance cars.

The thermo-insulating container is a bag made of moisture-proof tent cloth with a heat-insulation frame. The operating algorithm of the thermo-insulating container provides heating of both compartments one after another, however, the priority of the quickest possible achievement of the operating temperature ($34 \pm 2^\circ\text{C}$) is preserved for the small compartment.

The thermo-insulating container is powered by the car on-board power supply system.

The thermo-insulating container is equipped with a power supply mode selector switch, which allows to maintain its operation in case of car motor shutdown during standby mode.

All details and product specifications

The main feature of thermo-insulating container is availability of two compartments: a large one (designed for 4 vials) and a small one (designed for 2 vials), each of them is fitted with its own heating element and a fan for temperature gradient equalising.

THERMO-INSULATING CONTAINERS

● Chemical disinfection.

FOLDING IV POLE SHR-“MEDPLANT”

Designed for infusions in ambulance cars, field conditions and at home.

The device is a collapsible infusion pole with a folding base fitted with removable textile infusion vial holders which are fixed using special holder hooks.

The pole can be installed on the floor or fixed to stretchers, carts, tables and other surfaces using a clamping bracket included in the scope of supply. Two S-shaped brackets are included in the scope of supply of the pole for vial hanging in conditions not allowing to install the pole.

The pole set is supplied in a convenient textile case with a transportation handle.

All details and product specifications

- Collapsible construction with a folding base.
- Removable holders and hooks are included in the set.
- Possibility to attach to stretchers, carts, tables and other surfaces.

FOLDING IV POLE

HOLDERS

● Chemical disinfection.

SET OF HOLDERS FOR INFUSION VIALS DF-“MEDPLANT” (INFUSION SET)

Used for attaching infusion vials.

The set includes two textile infusion vial holders and two metal S-shaped brackets with one end used for hanging the vial and the other used for attaching to any appropriate surface (car dashboard, cart frame, bed headboard, etc.).

The holders have two sizes, for 200 and 400 mL vials, and are made of backpack ribbons with velcros for vial fixation.

All details and product specifications

- Possibility to fix to any appropriate surface.
- Vial size colour labelling: blue for 200 mL vials and black for 400 mL vials.
- Storage case is included.

SET OF HOLDERS FOR INFUSION VIALS

● Chemical disinfection.

TEXTILE AND PLASTIC AMPOULE HOLDERS

Used for placing, storing and transporting ampoules in a setup case, a medical bag or separately.

Textile ampoule case is made of waterproof PVC fabric, each ampoule is placed into an individual cell made of elastic ribbon.

All details
and product
specifications

Plastic ampoule case presents a case with such construction that provides good protection of ampoules. Each ampoule is placed into an individual cell providing quick and convenient access to it.

Fitted with labels for notes.

MONITORING PRODUCTS

- 44 Portable resuscitation CO₂/SPO₂ MONITOR “CAPNOPULSE”
- 46 Portable resuscitation CO₂ monitor “CAPNOTEST-2”/“MINICAP”
- 48 Portable resuscitation SPO₂ monitors (PULSE OXIMETERS) “OXITEST-1 ”/
“OXITEST-2”

PORTABLE RESUSCITATION CO₂/SPO₂ MONITOR “CAPNOPULSE”

Real-time monitoring of physiological parameters.

The device allows to:

Capnography channel (main stream): EtCO₂, FiCO₂, and respiratory rate monitoring, capnogram display.

Pulse oximetry channel: SPO₂ and pulse rate monitoring, photoplethysmogram display, indication of low perfusion levels.

It can be powered by a battery, 220 V network and car lighter socket.

Two cases: the main one is for device transportation and component parts which are used often, additional case is for storage the other component parts.

All details and product specifications

A compact device combining the functions of capnograph and pulse oximeter (CapnoTest-2 and OxyTest-2). Functionality and interface are oriented for the extreme medicine providing. It can be used for patients of any age group.

PORTABLE RESUSCITATION CO₂ MONITOR “CAPNOTEST-2”/ “MINICAP”

Monitoring the carbon dioxide levels in the main stream.

EtCO₂, FiCO₂, and respiratory rate monitoring, capnogram display.

Functions and interface are intended for emergency medical care. These devices can be used for tracheal intubation control; evaluating the resuscitation effectiveness; the ventilation providing and control; resuscitation monitoring during patient transportation.

All details and product specifications

The device can be used to monitor adults and children in any healthcare institutions or outside them during the professional patient transportation.

DEVICES FOR IMMOBILIZATION AND MEDICAL EVACUATION

- 52 Sets of transport immobilization folding splints of KSHTI-series
- 56 Set of transport ladder splints KSHTL-MP-01
- 58 Foldable traction leg splint SHTS-01-“MEDPLANT”
- 60 Pelvic stabilization belt: reusable PST-“MEDPLANT”/ disposable PSTo-“MEDPLANT”
- 62 Cravat bandage PK
- 64 Immobilization spine board YXH-1A6A
- 66 Device for patient’s moving UP-“MEDPLANT”
- 68 Frameless stretchers “PLASCH”
- 72 Evacuation sledges “VOLOKUSHI” model no.1/ model no.2
- 74 Injured personnel carrier RUP-“MEDPLANT”

SETS OF TRANSPORT IMMOBILIZATION FOLDING SPLINTS OF KSHTI-SERIES

Immobilization and transportation of patients with injuries of upper and lower extremities and cervical spine.

The splints are specially shaped plastic plates with longitudinal and transverse perforations for easy customization to fit any limb length and diameter. The splints are fixed by means of bandages.

The splint-collar is designed to fit both the neck's circumference and height. The splint-collar is secured with a textile strip.

All details and product specifications

- Adjustable for any size.
- Easily and tightly sized based on limb shape and do not require any additional actions.
- Lightweight and compact.
- Radiotransparent.

SINGLE-USE SETS OF TRANSPORT IMMOBILIZATION FOLDING SPLINTS

KSHTI-02 is made of cardboard and KSHTI-03 is made of plastic. Single-use design prevents the risk of cross-contamination. Assembly instruction is attached to each splint for convenience.

- Do not require disinfection and repackaging.

- Transport immobilisation cervical collar

SET OF TRANSPORT LADDER SPLINTS KSHTL-MP-01

Immobilization of upper and lower limbs during medical evacuation.

The set includes transportation ladder splints for the upper and lower limbs. The products are a PE-foam wire frame sheathed with a strong PVC fabric.

Unlike classic ladder splints, the KSHTL-MP-01 does not require any additional preparation for operation. All you need to do is to bend the splint in the desired location, to shape it according to the limb shape, and to secure it with bandages.

Absence of hardly-disinfectable velcro fixing elements allows the splints to serve for a long period of time.

All details and product specifications

The splints set is supplied in a convenient fabric pouch with a drawstring and carrying handle.

LADDER SPLINT SET

● Chemical disinfection.

FOLDABLE TRACTION LEG SPLINT SHTS-01-“MEDPLANT”

Immobilization of the lower limb with its simultaneous extension in case of femoral bone fracture.

The traction splint consists of 7 metal elbows securely joined in a sturdy framework.

The elbows are linked by a bungee cord, which allows the splint to be quickly brought into its working position. Below, the design features a limb extension system, equipped with a fixing foot strap. Above, there is a clamping system with a fixing groin strap. Adjustable straps along the splint's length restrain the leg effectively.

The entire structure is packaged and transported in a special case with a check opening.

All details and product specifications

Gradual and controlled mechanical stretching along the limb axis made by the splint allows to prevent post-traumatic movement of bone fragments with their further reliable fixation.

FOLDING TRACTION LEG SPLINT

● Chemical treatment.

PELVIC STABILIZATION BELT: REUSABLE PST-“MEDPLANT”/ DISPOSABLE PST₀-“MEDPLANT”

Immobilization and stabilization of pelvic bones in case of unstable fractures and rupture of ligaments.

The immobilization belt consists of a base, strap, and tightening loop.

The belts are of two variants: disposable and reusable. The disposable ones are made of PVC, reusable ones – of natural cotton and neoprene, while the strap and loop are made of a sling. The belt features a color or digital scale to control its tightness during the belt application. The belt loop is intended for forced support during patient stabilization. The final retainer is a «Velcro» fastener. The device is radiotransparent, compact, strong and easy to use. There are three possible sizes: large, medium and small.

multiple-use

All details
and product
specifications

single-use

It stabilizes the pelvic bones in case of unstable fractures, bones misalignment and ligamentous injury. The device decreases the concealed bleeding and reduces the pain syndrome.

IMMOBILISATION BELT

● Chemical treatment.

● Single-use product, not reusable.

CRAVAT BANDAGE PK

For unloading of shoulders and forearms in case of impact injuries, dislocations, upper limb bone fractures, shoulder joint ligament damages as well as during rehabilitation after surgery.

PKv-01 and PKd-01 cravat bandages are made of PVC fabric, disinfection-resistant and are designed for long-term service. They are fitted with a strong and adjustable belt.

PKu-01 universal cravat bandages have the form of a triangular cravat made of cotton fabric which has two colours: white and olive.

All details and product specifications

Convenient and easy to use.

CRAVAT
BANDAGE

PKu-01 universal (medical cravat)

IMMOBILIZATION SPINE BOARD YXH-1A6A

Immobilization and transportation of patients with injuries of the back, cervical spine, upper and lower limbs.

The spine board is made of durable colored PE, free of impurities and latex. The product materials withstand repeated sanitization and chemical disinfection, without compromising its appearance or durability. The spine board can be positioned on a medical stretcher or used with a vacuum mattress, or independently. The hole in the spine board, located at the patient's lower limbs, enables separate immobilization of the legs and thighs in case of fractures.

All details and product specifications

The board is radiotransparent, its floatability allows to use it for rescue operations on water. A large number of holes in the board allows to quickly and conveniently fix injured persons of any body constitution using a system of belts.

DEVICE FOR PATIENT'S MOVING UP-“MEDPLANT” MATTRESS-SLIDER MODEL NO.1/ MATTRESS-SLIDER MODEL NO.2, SLIDE SHEET

For moving the lying patients from one surface to another (bed, wheelbarrow, surgical table, manipulating table, etc.)

The mattress-slider does not occupy much place, easily folded and quickly unfolded.

The surface the patient is lying on shall be flat and rigid. The height difference between the wheelbarrow and the surface shall not exceed 10 cm.

All details and product specifications

The slider makes it easy to move patients for the medical staff and creates comfort and safety for patients.

FRAMELESS STRETCHERS “PLASCH”

Frameless stretchers are essential for the patients transporting in cramped or confined areas where traditional rigid stretchers cannot fit.

The stretcher canvas is crafted from a durable, low-maintenance material. It is water-resistant, impervious to moisture, and resistant to bacteria, fungi, stains, and rot.

The stretcher comes with sturdy slings for patient fixation and ergonomic handles designed to evenly distribute the weight over the entire length.

All stretchers come with covers for easy storage.

All details and product specifications

The stretchers are compact after folding and are therefore convenient for fitting small first-aid stations and mobile units.

MODEL 2U

MODEL 3

MODEL 4

PLASCH FRAMELESS STRETCHERS

Model 3 is made of strong PVC tent fabric and designed for operations in mass destruction areas.

Model 4 is made of strong light-weight “Oxford 240” synthetic fabric with a water-resistant coating and a heat-insulation layer. The stretchers are stitched with belt sling, the handles are made of a belt sling with PVC tube coating. Model 5 is made of light-weight strong synthetic fabric with water-resistant coating, fitted with loop handles made of belt slings.

MODEL 5

EVACUATION SLEDGES “VOLOKUSHI” MODEL NO.1/ MODEL NO.2

Safe and reliable evacuation of wounded casualties unable to move independently during tactical or other emergencies.

Evacuation sledges «VOLOKUSHI» are a flexible carrier with system of fixation straps. They slide smoothly over various surfaces that makes easier the evacuation process for rescuer and more comfort for patient.

The system of fixation straps provides a reliable patient stabilization and protects the patient during transportation.

All details and product specifications

Quick to deploy and they do not require additional assembling. Evacuation may be performed by a single person.
